### Explanations for the Atlas

- [Table of Distances](#)
- [Population of Pennsylvania by Counties](#)
- [Bedford County](#)

---

Footnotes:

1. Data from the 1870 Census
2. Data from the 1880 Census
WOODBURY
Scale 200 feet to the inch.

PLEASANTVILLE
Allum Bank P.O.
Scale 200 feet to the inch.
A draught of a tract of land situated at Bedford, in the County of Cumberland, containing two thousand, eight hundred and ten acres and an half of one acre, with the usual allowance of six per cent. for roads; Surveyed for the Honorable the Proprietaries, the 29th day of October, 1761, in pursuance of a warrant bearing date the twenty-fifth day of November, one thousand seven hundred and forty-eight,—174*.

By JOHN ARMSTRONG, D. S.

In Testimony, that the above is a copy of the original, remaining on file in the office of the Surveyor General of Pennsylvania, I have hereunto set my hand and affixed the seal of said office, at Harrisburg, this nineteenth day of August, A.D., 1864.

Recorded in Borough Record No. 3, pages 31 and 32.

**Explanations for the Atlas**

- Rail Roads
- Roads
- Canals
- Rivers
- Distance (in miles)
The geographical limits of Somerset County are, for the most part, broadly defined by natural boundaries. The Allegheny Mountain ridge, the great north-south trending mountain range of the eastern United States, forms the western boundary of the county. The confluence of the Allegheny and Monongahela rivers marks the southern boundary of the county. The northern boundary is formed by the West Branch of the Allegheny River. The eastern boundary is not clearly defined, but it is generally considered to be the line of highest elevation that forms the eastern boundary of the county.

The Allegheny Mountain ridge, which runs through the center of the county, is a prominent feature of the landscape. It is separated from the rest of the county by a depression known as the Allegheny River Valley. The river, which flows through the valley, is a major waterway for both transportation and recreation. The Allegheny River is also a significant source of water for the surrounding area.

The geology of Somerset County is complex, with a variety of rock types and formations. The area is known for its coal deposits, which are an important part of the county's economy. The coal measures, which are a sequence of sedimentary rocks deposited during the Carboniferous period, are well exposed in the county. The coal measures are divided into two main units: the Lower Coal Measures and the Upper Coal Measures. The Lower Coal Measures are the oldest and contain the oldest coal deposits, while the Upper Coal Measures are younger and contain a variety of rocks, including sandstones, shales, and limestones.

In short, Somerset County is a place of natural beauty and geological significance, with a rich history and diverse landscape. It is a place where history and nature coexist, and where visitors can experience the beauty of the Allegheny Mountains and the rich cultural heritage of the region.
The prominence of the axis through Somerset County renders unnecessary any detailed statements as to the general plan of the streams. The principal one, the Conemaugh, is the southeastern arm of the Allegheny system. As it flows north and west from the southwest corner of Fayette County, it branches the Somerset and Cambria counties, and, after meandering for a distance of more than 100 miles through the interior of the county, it turns sharply north and then east, forming the boundary between the latter and the adjacent counties of Westmoreland and Butler. The gap of the Youghiogheny is important as a watercourse, the most of which flows northeast, though their representatives may be present about thereabouts. The entire Freeport area is drained by a number of small streams, the most important being the Conemaugh, which is the principal stream of the county. It is about 80 miles long, and its average width is about 30 feet. The Conemaugh river rises in the hills of the county, passing through the town of Conemaugh, and then, after meandering for a distance of about 50 miles, it enters the Conemaugh River at its confluence with the West Branch of the Conemaugh, near the town of Conemaugh. The Conemaugh river is about 80 miles long, and its average width is about 30 feet. It has a number of tributaries, the most important being the Conemaugh, which is the principal stream of the county. It is about 80 miles long, and its average width is about 30 feet. The Conemaugh river rises in the hills of the county, passing through the town of Conemaugh, and then, after meandering for a distance of about 50 miles, it enters the Conemaugh River at its confluence with the West Branch of the Conemaugh, near the town of Conemaugh.

The northern half of the county is drained by a number of small streams, the most important being the Conemaugh, which is the principal stream of the county. It is about 80 miles long, and its average width is about 30 feet. The Conemaugh river rises in the hills of the county, passing through the town of Conemaugh, and then, after meandering for a distance of about 50 miles, it enters the Conemaugh River at its confluence with the West Branch of the Conemaugh, near the town of Conemaugh.
